DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 13-15, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Lin et al., hereinafter Lin (U.S. 5,932,900).

Regarding claims 13 and 14, Lin discloses in figure 2 a method of fabricating an integrated circuit chip comprising processing a semiconductor substrate to form a gate array architecture of transistors in the substrate, the gate array architecture comprising a plurality of N-type active regions 230 and 270, and P-type active regions 220 and 260, as shown in the figure; the active regions having partially overlying polysilicon landing sites at least one forming both N-type and P-type transistors; wherein the regions are relatively-sized to form two distinct transistor sizes, smaller N- and P-type transistors and larger N- and P-type transistors (see column 3, lines 16-36).

Regarding claim 15, see figure 2, wherein it is shown that landings for the smaller and larger transistors (the two adjacent columns shown in the figure) are not connected.

Regarding claim 18, interconnects 310 and 320 of figure 3 are over the gate array.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin.

Lin discloses the claimed invention, as discussed above, except for expressly disclosing the exact order of transistor sizes. It would have been within the level of ordinary skill in the art to choose the appropriate ratio between the larger and smaller transistors, since a mere change in the size of a component is recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955).

Allowable Subject Matter

5. Claims 19, 20, and 27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. The following is a statement of reasons for the indication of allowable subject matter:

Art Unit: 2814

The primary reason for indication of allowability of claims 19, 20, and 27 is the inclusion therein of the limitation that of the gate array structure is used as a flip-flop, and clock buffers.
